PROPER LIFTING TECHNIQUES:

1. Assess the situation. Size up the load, get firm footing and stand close to the object.
2. Bend at the knees, not at the waist.
3. Use the strong muscles in your legs and abdomen to lift.
4. Keep the object close to your body.
5. If you need to change direction, move your feet. Do not twist your body.
6. Place the object down by bending your knees. Do not bend at the waist.
